How We're Different

Strategy First - Cloud technologies yield a myriad of benefits, but only when they are thoughtfully implemented in the context of your business. We bring a deep understanding of the cloud software landscape and how it uniquely affects organizations in your industry. We deliver the greatest business impact possible with the lowest risk.

Enterprise-centric, not technology-centric - We help you identify the intended outcomes, success measures, and key stakeholders to ensure your people and processes are fully aligned with your cloud technology strategy. Leveraging iterative techniques, we continually align the business with IT to deliver a superior outcome. Through a comprehensive, end-user driven approach to change management, we establish a flexible and lasting framework for you to reap continuous rewards from your cloud investments.

Unmatched track record - We maintain long-term relationships with our customers because they trust we'll get the job done. With an unparalleled customer satisfaction rating and over 1,800 cloud implementations, Acumen Solutions brings the innovation and experience you need.

We Change the Way Business Gets Done

Our clients make an extraordinary leap forward in strategy, processes and performance. We are a global consultancy that unlocks each client's vast and untapped potential.
